For further information on the product: www.smeg.com

Instructions

1 Instructions

1.1 General safety instructions

Risk of personal injury

- Never touch the heating elements during use.
- Keep children under the age of eight at a safe distance unless they are constantly supervised and make sure that they do not play with the appliance.
- In accordance with current regulations, children between 3 and 8 years old can pick up or load food from the appliance, but we strongly advise against allowing children under 8 to carry out these operations and in general to use the appliance.
- Never try to put out a fire or flames with water: turn off the appliance and smother the flames with a fire blanket.
- Cleaning and maintenance that should be performed by the user must not be carried out by unsupervised children.
- Have qualified personnel carry out installation and assistance interventions according to the standards in force.
- Do not modify this appliance.
- Do not insert pointed metal objects (cutlery or utensils) into the slots in the appliance.
- Do not try to repair the appliance yourself or without the intervention of a qualified technician.
- Do not touch (especially with wet hands) frozen products or put them in your mouth directly.
- Do not store inflammable, explosive or volatile substances.
- Do not keep explosive substances, such as spray bottles with flammable propellants in the appliance.
- Bottles containing strong alcoholic drinks must be tightly closed and stored vertically.
- If the power supply cable is damaged, contact technical support immediately and they will replace it, so as to prevent any risk.

- Opening the door for long periods can cause a significant increase of the temperature in the compartments of the appliance.
- Clean regularly surfaces that can come in contact with food and accessible drainage systems.
- Store raw meat and fish in suitable containers in the refrigerator, so that it is not in contact with or drip onto other food.
- If the refrigerating appliance is left empty for long periods, switch off, defrost, clean, dry, and leave the door open to prevent mould developing within the appliance.

Risk of damaging the appliance

- **WARNING:** When positioning the appliance, ensure the supply cord is not trapped or damaged.
- **WARNING:** Do not locate multiple portable socket-outlets or portable power supplies at the rear of the appliance.
- Do not use plug adapter.
- Never rest sharp metal objects such as knives, forks, spoons and lids on the appliance during use.
- Do not use abrasive or corrosive detergents (e.g. scouring products, stain removers and metallic sponges) on glass parts.
- Do not sit on the appliance.
- Do not prize on the door or handle to move the appliance.
- Do not use steam jets to clean the appliance.
- Do not use the appliance to cool rooms for any reason.
- Always unplug the appliance in the event of a fault or when performing cleaning or maintenance.
- Do not keep liquids in tins or glass containers in the freezer.
- Do not use sharp metal objects to remove excess ice build-up in the freezer compartment.
- To prevent instability of the appliance, install and secure it correctly as indicated in the instructions provided in this manual.
- Do not place heavy objects on the top of the appliance.

Instructions

- If installed near another refrigerator or freezer, keep it at a minimum distance of 2 cm.
- Do not install/use the appliance outdoors.

For this appliance

- **WARNING:** risk of fire / flammable materials.

- The appliance may only be used by children aged 8 years and over, and by people of reduced physical, sensory or mental capacity, or lacking in experience and knowledge in the use of the appliance, provided that they instructed on safe use of the appliance and the risks connected to it by adults who are responsible for their safety.
- Children must be supervised to ensure that they do not play with the appliance.
- Do not rest any weight or sit on the open door of the appliance.
- Take care that no objects are stuck in the doors.
- The appliance contains a small quantity of isobutane (R600a), make sure not to damage the cooling circuit during transport, installation and cleaning.
- Keep the ventilation openings surrounding the appliance or in the nearby area free from any obstructions.
- Do not use mechanical, electrical or chemical products other than those recommended by the manufacturer to speed up the defrosting process.
- Do not damage the cooling circuit (if it can be accessed).
- Do not use electrical appliances inside food storage compartments unless these are of the type recommended by the manufacturer.
- In the event of damage to the cooling circuit, avoid the use of naked flames and ventilate the area properly.
- Do not use the appliance or parts of it in ways other than those specified in this manual.

1.2 Manufacturer liability

The manufacturer declines all liability for damage to persons or property caused by:

- use of the appliance other than that specified;
- failure to comply with the instructions in the user manual;
- tampering with any part of the appliance;
- use of non-original spare parts.

1.3 Appliance purpose

The appliance is designed for use in a domestic or similar environment, for instance:

- staff kitchen areas in shops, offices and other working environments;
- farm houses and by guests in hotels, motels and other residential type environments;
- bed and breakfast establishments;
- catering and similar non-retail applications.
- The appliance is not designed for professional and commercial use.
- This appliance is for refrigeration and conservation of fresh and frozen foods in the home. Every other use is considered inappropriate.

- The appliance is not designed to operate with external timers or with remote-control systems.

1.4 Disposal

This appliance must be disposed of separately from other waste

(Directives 2002/95/EC, 2002/96/EC, 2003/108/EC).

The appliance does not contain substances in quantities sufficient to be considered hazardous to health and the environment, in accordance with current European directives.

To dispose of the appliance:

- Cut the power supply cable and remove it along with the plug.

Power voltage

Danger of electrocution

- Disconnect the mains power supply.
- Unplug the appliance.
- Deliver the appliance to the appropriate recycling centre for electrical and electronic equipment waste, or return it to the retailer when purchasing an equivalent product, on a one for one basis.

Instructions

- If the appliance is replaced, remove the door and leave the shelves in their positions, in order to prevent children from being trapped inside.

Our appliances are packaged in non-polluting and recyclable materials.

- Deliver the packing materials to the appropriate recycling centre.

Plastic packaging

Danger of suffocation

- Do not leave the packaging or any part of it unattended.
- Do not let children play with the plastic bags.

1.5 Technical support

- If the appliance malfunctions, contact the technical support service. Repairs should only be carried out by qualified personnel.
- Make sure you have the model and serial number, which can be found on the identification plate, at hand.
- Only use original spare parts.
- Do not try to repair the appliance yourself or without the assistance of a qualified technician: in addition to safety issues, it could also invalidate the guarantee.
- Original spares will be avail-

lable for 10 years after the model is no longer produced.

- The following spare parts are only available to authorised repair technicians: electronic boards, thermostats, temperature sensors, hinges, lamps, door handles.

1.6 Identification plate

The identification plate bears the technical data, serial number and brand name of the appliance. Do not remove the identification plate for any reason.

1.7 Energy label

Information about the performance of your appliance can be found in the EU EPREL database. Use the following link and enter the model name (which can be found on the identification plate):

<https://eprel.ec.europa.eu>

The website can be accessed quickly using the QR code on the energy label. Use a device with a QR reader app.

The energy label should be kept together with all the documents supplied with the appliance.

1.8 This user manual

This user manual is an integral part of the appliance and must therefore be kept in its entirety and in an accessible place for the whole working life of the appliance. Read this user manual carefully before using the appliance.

1.9 How to read the user manual

This user manual uses the following reading conventions:

Warning

Serious injury or death risk

Risk of electric shock

Dangerous voltage risk

Fire

Warning; risk of fire / flammable materials

Warning

Injury or property damage risk

Important

Operating the system correctly

Description

Description of the appliance and its accessories.

Use

Information on the use of the appliance and its accessories, food storage advice.

Cleaning and maintenance

Information for proper cleaning and maintenance of the appliance

Installation

Information for the qualified technician: Installation, operation and inspection.

Description

2 Description of the appliance

2.1 General Description

This presentation is only for information about the parts of the appliance. Parts may vary according to the appliance model.

- A) Refrigerator compartment
- B) Freezer compartment
- 1) Display and control panel
- 2) Cooling fan
- 3) Refrigerator shelves
- 4) Chiller drawer (meat and fish)
- 5) Fruit and vegetable drawer cover

- 6) Fruit and vegetable drawer with humidity regulator
- 7) Icemaker *
- 8) Upper drawer cover
- 9) Freezer drawers
- 10) Levelling feet
- 11) Bottle shelf
- 12) Door internal shelves
- 13) Egg holder

3 Using the appliance

3.1 Information about New Generation Cooling Technology

Fridges with new-generation cooling technology have a different operating system to static fridges.

Other (static) fridges may experience a build up of ice in the freezer compartment due to door openings and humidity in the food. In such fridges, regular defrosting is required; the fridge must be switched off, the frozen food moved to a suitable container and the ice which has formed in the freezer compartment removed. In fridges with new-generation cooling technology, a fan blows dry cold air evenly throughout the refrigerator and freezer compartments. The cold air cools your food evenly and uniformly, preventing humidity and ice build-up. In the refrigerator compartment, air blown by the fan, located at the top of the refrigerator compartment, is cooled while passing through the gap behind the air duct. At the same time, the air is blown out through the holes in the air duct, evenly spreading cool air throughout the refrigerator compartment. There is no air passage between the

freezer and refrigerator compartments, therefore preventing the mixing of odours.

As a result, your fridge, with new-generation cooling technology, provides you with ease of use as well as a huge volume and aesthetic appearance.

3.2 Display and Control Panel Using the control panel

1. Enables the setting of the freezer.
2. Enables the setting of the refrigerator.
3. Freezer set value screen.
4. Refrigerator set value screen.
5. Economy mode symbol.
6. Super freeze symbol.
7. Alarm symbol.

3.3 Door open alarm

When the door of the refrigerator or freezer compartment is left open for too long, an audible warning warns you to close the door.

3.4 Operating your Fridge Freezer

Once you have plugged in the product, all symbols will be displayed for 2 seconds and the initial values will be shown as $-18\text{ }^{\circ}\text{C}$ on the freezer adjustment indicator, and $+4\text{ }^{\circ}\text{C}$ on the refrigerator adjustment indicator.

3.4.1 Freezer temperature settings

- The initial temperature value for the freezer setting indicator is $-18\text{ }^{\circ}\text{C}$.
- Press the freezer set button once.

When you first press the button, the previous value will blink on the screen.

- Whenever you press the same button, a lower temperature will be set ($-16\text{ }^{\circ}\text{C}$, $-18\text{ }^{\circ}\text{C}$, $-20\text{ }^{\circ}\text{C}$, $-22\text{ }^{\circ}\text{C}$ or $-24\text{ }^{\circ}\text{C}$).
- If you continue to press the button, it will restart from $-16\text{ }^{\circ}\text{C}$.

NOTE Eco mode gets activated automatically when the temperature of the freezer compartment is set to $-18\text{ }^{\circ}\text{C}$.

3.4.2 Fridge Temperature Settings

- The initial temperature value for the refrigerator setting indicator is $+4\text{ }^{\circ}\text{C}$.
- Press the refrigerator button once.
- Whenever you press the button, a lower temperature will be set ($+8\text{ }^{\circ}\text{C}$, $+6\text{ }^{\circ}\text{C}$, $+5\text{ }^{\circ}\text{C}$, $+4\text{ }^{\circ}\text{C}$, or $+2\text{ }^{\circ}\text{C}$).
- If you continue to press the button, it will restart from $+8\text{ }^{\circ}\text{C}$.

3.4.3 Super Freeze mode

Purpose

- To freeze a large quantity of food that cannot fit on the fast freeze shelf.
- To freeze prepared foods.
- To freeze fresh food quickly to retain freshness.

How to use

To enable the super freeze mode, press and hold the freezer temperature setting button for 3 seconds. Once the super freeze mode has been set, the super freeze symbol on the indicator will be lit and the machine will beep to confirm the mode has been switched on.

During Super Freeze Mode:

- The temperature of the Refrigerator may be adjusted. In this case, Super Freeze mode will continue.
- Economy mode cannot be selected.
- Super Freeze mode can be cancelled in the same way it is selected.

Notes:

- The maximum amount of fresh food (in kilograms) that can be frozen within 24 hours is shown on the appliance label.
- For optimal appliance performance in maximum freezer capacity, activate super freeze mode 3 hours before you put fresh food into the freezer.  Super freeze mode will automatically cancel after 24 hours or when the freezer sensor temperature drops below -32 °C.

Recommended Settings for the Freezer and Refrigerator Compartment Temperature

Freezer Compartment	Refrigerator Compartment	Remarks
-18 °C	4 °C	For regular use and best performance.
-20 °C, -22 °C or -24 °C	4 °C	Recommended when environmental temperature exceeds 30 °C.
Super Freeze mode	4 °C	Must be used when you wish to freeze food in a short period of time.
-18 °C, -20 °C, -22 °C or -24 °C	2 °C	These temperature settings must be used when the environmental temperature is high or if you think the refrigerator compartment is not cool enough because the door is being opened frequently.

3.5 Temperature Adjustment Warnings

- It is not recommended that you operate your appliance in environments colder than 10°C in terms of its efficiency.
- Do not start another adjustment while you are already making an adjustment.
- Temperature adjustments should be made according to the frequency of door openings, the quantity of food kept inside the appliance and the ambient temperature in the location of your appliance.
- In order to allow your appliance to reach the operating temperature after being connected to mains, do not open the doors frequently or place large quantities of food in the appliance. Please note that, depending on the ambient temperature, it may take 24 hours for your appliance to reach the operating temperature.
- A 5 minute delay function is applied to prevent damage to the compressor of your appliance when connecting or disconnecting to mains, or when an energy breakdown occurs. Your appliance will begin to operate normally after 5 minutes.

3.6 Accessories

3.6.1 Manual ice maker (In some models)

- Pull the lever towards you and remove the icemaker tray
- Fill with water to the marked level
- Hold the left end of the lever and set the ice-tray on the icebox
- When ice cubes have formed, twist the lever to drop the ice cubes into the icebox.

Do not fill the icebox with water in order to make ice. It will break.

3.6.2 Container with drawers

The freezer drawers allow food to be accessed more easily.

3.6.3 Super cold drawer (In some models)

Removing the container with drawer:

- Pull the container with drawer out as far as possible
- Pull the front of the container with drawer up and out

Carry out the opposite of this operation when refitting the sliding compartment.

Always keep hold of the handle of the container with drawer while removing it.

Keeping food in the super cold drawer, instead of the freezer or refrigerator compartments, allows food to retain freshness and flavour for longer, while preserving its fresh appearance. When the super cold drawer tray becomes dirty, remove it and wash with water. (Water freezes at 0°C, but food containing salt or sugar freezes at temperatures lower than this).

The super cold drawer is usually used for storing foods such as raw fish, lightly pickled food, rice, and so on.

Do not put food you want to freeze or ice trays (to make ice) in the super cold drawer.

To remove the shelf of the super cold drawer proceed as follows:

The dial, located behind the shelf, must be opened if any condensation is seen on the glass shelf.

- Pull the drawer towards you by sliding it on the rails.
- Pull the drawer up from the rail and remove it from the refrigerator.

3.6.4 Adjusting humidity in the fruit and vegetable drawer (In some models)

If the fruit and vegetable drawer is full, the fresh dial located in front of the drawer should be opened. This allows the air in the fruit and vegetable drawer and the humidity rate to be controlled, to increase the life of food within.

3.6.5 Maxi-fresh preserver (if available)

Maxi Fresh Preserver technology helps to remove ethylene gas (a bioproduct released naturally from fresh foods) and unpleasant odors from the fruit and vegetable drawer. In this way, food stays fresh for a longer time.

- Maxi Fresh Preserver must be cleaned once in a year. The filter should be waited for 2 hours at 65°C in a oven.
- To clean the filter, please remove the back cover of the filter box by pulling it in the direction of the arrow.
- The filter should not be washed with water or any detergent.

Visual and text descriptions in the accessories section may vary according to the model of your appliance.

4 Food storage

4.1 Refrigerator compartment

For normal operating conditions, set the temperature of the refrigerator compartment to +4 or +6 °C.

- To reduce humidity and avoid the consequent formation of frost, always store liquids in sealed containers in the refrigerator. Frost tends to concentrate in the coldest parts of the evaporating liquid and, in time, your appliance will require more frequent defrosting.
- Never place warm food in the refrigerator. Warm food should be allowed to cool at room temperature and should be arranged to ensure adequate air circulation in the refrigerator compartment.
- Make sure no items are in direct contact with the rear wall of the appliance as frost will develop and packaging will stick to it. Do not open the refrigerator door frequently.
- We recommend that meat and clean fish are loosely wrapped and stored on the glass shelf just above the vegetable bin where the air is cooler, as this provides the best storage conditions.
- Store loose fruit and vegetable items in the suitable containers of the fruit and vegetable drawer.
- Store loose fruit and vegetable items in the suitable fruit and vegetable drawer.
- Storing fruit and vegetables separately helps prevent ethylene-sensitive vegetables (green leaves, broccoli, carrot, etc.) being affected by ethylene-releasing fruits (banana, peach, apricot, fig etc.).
- Do not put wet vegetables into the refrigerator.
- Storage time for all food products depends on the initial quality of the food and an uninterrupted refrigeration cycle before refrigerator storage.
- To avoid cross-contamination do not store meat products with fruit and vegetables. Water leaking from meat may contaminate other products in the refrigerator. You should package meat products and clean any leakage on the shelves.
- Do not put food in front of the air flow passage.
- Consume packaged foods before the recommended expiry date.

Note: Potatoes, onions and garlic should not be stored in the refrigerator.

The table below is a quick guide to show you the most efficient way to store the major food groups in your refrigerator compartment.

Food	Maximum storage time	How and where to store
Vegetables and fruits	1 week	Vegetable bin
Meat and fish	2 - 3 Days	Wrap in plastic foil, bags, or in a meat container and store on the glass shelf
Fresh cheese	3 - 4 Days	On the designated door shelf
Butter and margarine	1 week	On the designated door shelf
Bottled products e.g. milk and yoghurt	Until the expiry date recommended by the producer	On the designated door shelf
Eggs	1 month	On the designated door shelf
Cooked food		All shelves

4.2 Freezer compartment

For normal operating conditions, set the temperature of the freezer compartment to -18 or -20 °C.

- The freezer is used for storing frozen food, freezing fresh food, and making ice cubes.
- For freezing fresh food; wrap and seal fresh food properly, that is the packaging should be air tight and shouldn't leak. Special freezer bags, aluminum foil polythene bags and plastic containers are ideal.
- Do not store fresh food next to frozen food as it can thaw the frozen food.
- Before freezing fresh food, divide it into portions that can be consumed in one sitting.
- Consume thawed frozen food within a short period of time after defrosting.
- Never place warm food in the freezer compartment as it will thaw the frozen food.
- Always follow the manufacturer's instructions on food packaging when storing frozen food. If no information is provided food, should not be stored for more than 3 months from the date of purchase.
- When purchasing frozen food, make sure that it has been stored under appropriate conditions and that the packaging is not damaged.
- Frozen food should be transported in appropriate containers and placed in the freezer as soon as possible.
- Do not purchase frozen food if the packaging shows signs of humidity and abnormal swelling. It is pro-

Use

bable that it has been stored at an unsuitable temperature and that the contents have deteriorated.

- The storage life of frozen food depends on the room temperature, the thermostat setting, how often the door is opened, the type of food, and the length of time required to transport the product from the shop to your home. Always follow the instructions printed on the packaging and never exceed the maximum storage life indicated.
- The maximum amount of fresh food (in kg) that can be frozen in 24 hours is indicated on the appliance label.
- To use the maximum capacity of the freezer compartment, use the glass shelves for the upper and middle section, and use the lower basket for the bottom section.
- Use the fast freezing shelf to freeze home cooking (and any other food which needs to be frozen quickly) more quickly because of the freezing shelf's greater freezing power. Fast freezing shelf is the bottom drawer of the freezer compartment.

Note: If you attempt to open the freezer door immediately after closing it, you will find that it will not open easily. This is normal. Once equilibrium has been reached, the door will open easily.

Important Notes:

- Never refreeze thawed frozen food.
- The taste of some spices found in cooked dishes (anise, basilica, watercress, vinegar, assorted spices, ginger, garlic, onion, mustard, thyme, marjoram, black pepper, etc.) changes and they assume a strong taste when they are stored for a long period of time. Therefore, add small amounts of spices to food to be frozen, or the desired spice should be added after the food has thawed.
- The storage time of food is dependent on the type of oil used. Suitable oils are margarine, calf fat, olive oil and butter. Unsuitable oils are peanut oil and pig fat.
- Food in liquid form should be frozen in plastic cups and other food should be frozen in plastic folios or bags.

 The table below is a quick guide to show you the most efficient way to store the major food groups in your freezer compartment.

Meat and fish	Preparation	Maximum storage time (months)
Steak	Wrap in foil	6 - 8
Lamb meat	Wrap in foil	6 - 8
Veal roast	Wrap in foil	6 - 8
Veal cubes	In small pieces	6 - 8
Lamb cubes	In pieces	4 - 8
Mince	In packaging without using spices	1 - 3
Giblets (pieces)	In pieces	1 - 3
Bologna sausage/salami	Should be kept packaged even if it has a membrane	
Chicken and turkey	Wrap in foil	4 - 6
Goose and duck	Wrap in foil	4 - 6
Deer, rabbit, wild boar	In 2.5 kg portions or as fillets	6 - 8

Freshwater fish (Salmon, Carp, Crane, Catfish)	After cleaning the bowels and scales of the fish, wash and dry it. If necessary, remove the tail and head.	2
Lean fish (Bass, Turbot, Flounder)		4
Fatty fishes (Tuna, Mackerel, Bluefish, Anchovy)		2 - 4
Shellfish	Clean and in a bag	4 - 6
Caviar	In its packaging, or in an aluminium or plastic container	2 - 3
Snails	In salty water, or in an aluminium or plastic container	3

 **Note:** Thawed frozen meat should be cooked as fresh meat. If the meat is not cooked after defrosting, it must not be re-frozen.

Vegetables and Fruits	Preparation	Maximum storage time (months)
String beans and beans	Wash, cut into small pieces and boil in water	10 - 13
Beans	Hull, wash and boil in water	12
Cabbage	Clean and boil in water	6 - 8
Carrot	Clean, cut into slices and boil in water	12

Use

Pepper	Cut the stem, cut into two pieces, remove the core and boil in water	8 - 10
Spinach	Wash and boil in water	6 - 9
Cauliflower	Remove the leaves, cut the heart into pieces and leave it in water with a little lemon juice for a while	10 - 12
Eggplant	Cut into pieces of 2cm after washing	10 - 12
Corn	Clean and pack with its stem or as sweet corn	12
Apple and pear	Peel and slice	8 - 10
Apricot and Peach	Cut into two pieces and remove the stone	4 - 6
Strawberry and Blackberry	Wash and hull	8 - 12

Vegetables and Fruits	Preparation	Maximum storage time (months)
Cooked fruits	Add 10 % of sugar to the container	12
Plum, cherry, sourberry	Wash and hull the stems	8 - 12

Food	Maximum storage time (months)	Thawing time at room temperature (hours)	Thawing time in oven (minutes)
Bread	4 - 6	2 - 3	4-5 (220-225 °C)
Biscuits	3 - 6	1 - 1.5	5-8 (190-200 °C)
Pastry	1 - 3	2 - 3	5-10 (200-225 °C)
Pie	1 - 1.5	3 - 4	5-8 (190-200 °C)
Phyllo dough	2 - 3	1 - 1.5	5-8 (190-200 °C)
Pizza	2 - 3	2 - 4	15-20 (200 °C)

Dairy products	Preparation	Maximum storage time (months)	Storage conditions
Packet (Homogenized) Milk	In its own packet	2 - 3	Pure Milk – in its own packet
Cheese - excluding white cheese	In slices	6 - 8	Original packaging may be used for short-term storage. Keep wrapped in foil for longer periods.
Butter, margarine	In its packaging	6	

Cleaning and maintenance

5 Cleaning and Maintenance

5.1 Defrosting

Occasional presence of frost inside the freezer compartment is normal.

Do not use electrical appliances (e.g. hair dryers) or sprays for defrosting, the plastic parts could be damaged.

Defrosting the refrigerator/freezer compartments

The refrigerator/freezer compartment does not require defrosting, as any ice which forms on the refrigeration plate will melt when the compressor is switched off. The defrosting process is automatic.

Defrost water is channelled directly into the vaporisation container on the back of the appliance, which lets it evaporate by means of the heat generated by the compressor.

5.2 Instructions

Improper use

Risk of damage to surfaces

- Do not use steam jets to clean the appliance.
- Do not use cleaning products containing chlorine, ammonia or bleach on parts made of steel or that have metallic surface finishes (e.g. anodizing, nickel or chromium-plating).
- Do not use abrasive or corrosive detergents (e.g. scouring products, stain removers and metallic sponges) on glass parts.
- Do not use rough or abrasive materials or sharp metal scrapers.

Power voltage

Danger of electrocution

- Turn off the appliance and unplug it from the mains before cleaning or maintenance.
- Do not pull the cable to remove the plug.
- After washing, rinse with clean water and dry carefully. When you have finished cleaning, reconnect the plug to the mains supply with dry hands.

5.3 Cleaning the appliance

 Do not wash your appliance by pouring water on it.

Cleaning the outside of the appliance

- The appliance may be cleaned with water or alcohol-based liquid detergents (e.g. window cleaning products).
- Avoid aggressive detergents and rough sponges in order not to damage the surfaces.
- Use a soft brush to remove dust and fume deposits from the condenser on the rear of the appliance.
- Clean the condenser with a brush at least twice a year. This will help you to save on energy costs and increase productivity.

 **The power supply must be disconnected during cleaning.**

Cleaning the inside of the appliance

- Clean the inside of the appliance with diluted liquid detergent and warm water, adding a little bit of vinegar.
- Make sure that no water enters the lamp housing and other electrical components.
- Door balconies and shelves can be removed.
- Clean the accessories separately by hand with soap and water. Do not wash accessories in a dish washer.
- Do not use sharp objects or spray products.

Replacing LED Lighting

To replace any of the LEDs, please contact the nearest Authorised Service Centre.

Note: The numbers and location of the LED strips may change according to the model.

Cleaning and maintenance

5.4 What to do if...

The appliance does not work:

- Make sure that the appliance is plugged in and that the main switch is turned on.

The compressor starts to function too often or functions continuously:

- The room temperature is too high.
- The door is being opened too often or for too long.
- The door is not closing/sealing properly.
- The freezer is loaded with too many fresh foods.
- Check that sufficient air can circulate around the sensor on the right-hand side of the refrigerator compartment.
- Check that the back of the freezer is properly ventilated and that the condenser is not too dirty.

Excessive ice or condensation has built up inside the refrigerator compartment:

- The door is being opened too often or for too long.
- Hot foods have been placed inside the refrigerator compartment.
- The foodstuffs or containers are in contact with the rear wall.
- The door seal is damaged or dirty. Clean or replace it.

The refrigerator compartment is not sufficiently cold:

- The thermostat is set at too high a temperature.
- The door is being opened too often or for too long.
- The door is not closing/sealing properly.
- The room temperature is too high.

The temperature inside the refrigerator compartment is too cold and the foodstuffs are freezing:

- The thermostat is set at too low a temperature.
- Food not contained in suitable containers or bags.
- Fruit and vegetables might be too wet.
- Foodstuffs placed against the rear wall of the refrigerator compartment.

Temperature inside freezer compartment not low enough to freeze foods properly:

- The thermostat is set at too high a temperature.
- The door is being opened too often or for too long.
- The door is not closing/sealing properly.
- The door seal is damaged or dirty. Clean or replace it.
- The food to be frozen contains large quantities of sugar.

Excessive ice has built up inside the freezer compartment:

- The thermostat is set at too low a temperature.
- The room temperature is too high.
- The door is being opened too often or for too long.
- The door is not closing/sealing properly.
- The door seal is damaged or dirty. Clean or replace it.
- Hot foods have been placed inside the freezer compartment.

Door hard to open just after closing:

- If you attempt to open the door again just after closing it (especially the freezer door), considerable strength is required. This is due to the vacuum created by the cooling of the warm air which has entered the freezer.

The doors are misaligned:

- Check that the appliance is level.
- Level the appliance using its feet.

Installation

6 Installation

6.1 Electrical connection

Power voltage

Danger of electrocution

- The appliance must be connected to ground in compliance with electrical system safety standards.
- Do not pull the cable to remove the plug.

General information

- Check the mains characteristics against the data indicated on the plate. The identification plate bearing the technical data, serial number and brand name is visibly positioned inside the appliance. Do not remove this plate for any reason.
- Make sure that the plug and socket are of the same type.
- Avoid using adapters, gang sockets or extensions as these could cause overheating and a risk of burns.
- The plug must always be accessible when the appliance is installed.
- Leave the appliance standing vertically for at least two hours before turning it on for the first time.
- If it is necessary to replace the power cable, this must be performed by an authorised technician from Technical Support Service.

6.2 Positioning

Heavy appliance
Crushing hazard

- Position the appliance with the aid of a second person.

Pressure on the open door
Risk of damages to the appliance

- Never use the open door to lever the appliance into place when fitting.
- Avoid exerting too much pressure on the door when open.
- The appliance must not be exposed to direct sunlight.
- The appliance must not be placed near sources of heat. If this is not possible, a suitable insulation panel must be used.
- Do not use the appliance outdoors.

Choice of location

Always install the appliance in a dry place with satisfactory ventilation.

- The appliance must not be installed near heat sources. If this is not possible, a suitable insulation panel must be used.
- If installed underneath wall units, at least 5 cm clearance must be left.
- Ensure that the appliance is located with sufficient space for the door to open and for the internal drawers and shelves to be removed, if necessary.

- Your appliance is designed to operate in the ambient temperature (T/SN = 10°C - 43°C) intervals stated in the standards, according to the climate class displayed on the information label. We do not recommend operating your appliance out of the stated temperature limits in terms of cooling effectiveness.

Important installation instructions

This appliance is designed to work in difficult climate conditions and is powered with 'Freezer Shield' technology which ensures that the frozen food in the freezer will not defrost even if the ambient temperature falls as low as -15 °C. So you may then install your appliance in an unheated room without having to worry about frozen food in the freezer being spoiled. When the ambient temperature returns to normal, you may continue using the appliance as usual.

Class	Room temperature
SN (Subnormal)	+ 10°C to + 32°C
N (Normal)	+ 16°C to + 32°C
ST (Subtropical)	+ 18°C to + 38°C
T (Tropical)	+ 18°C to + 43°C

6.3 Installation warnings

Before using your appliance for the first time, please pay attention to the following points:

- The operating voltage for your appliance is 220-240 V at 50Hz.
- The plug must be accessible after installation.
- Your appliance may have an odour when it is operated for the first time. This is normal and the odour will fade when your appliance starts to cool.
- Before connecting your appliance, ensure that the information on the data plate (voltage and connected load) matches that of the mains electricity supply. If in doubt, consult a qualified electrician.
- Insert the plug into a socket with an efficient ground connection. If the socket has no ground contact or the plug does not match, we recommend you consult a qualified electrician for assistance.
- The appliance must be connected with a properly installed fused socket. The power supply (AC) and voltage at the operating point must match with the details on the name plate of the appliance (the name plate is located on the inside left of the appliance).
- We do not accept responsibility for any damages that occur due to ungrounded usage.
- Place your appliance where it will not be exposed to direct sunlight.
- Your appliance must never be used outdoors or exposed to rain.
- Your appliance must be at least 50

EN

Installation

cm away from stoves, gas ovens and heater cores, and at least 5 cm away from electrical ovens.

- If your appliance is placed next to a deep freezer, there must be at least 2 cm between them to prevent humidity forming on the outer surface.
- Do not place heavy items on the appliance.
- Clean the appliance thoroughly before use (see Cleaning and Maintenance).
- Behind the appliance, in the lower part are the spacers that determine the minimum distance from the rear wall.
- The distance between the appliance and back wall must be a maximum of 75 mm.

6.4 During use:

- Do not connect your appliance to the mains electricity supply using an extension lead.
- Do not use damaged, torn or old plugs.
- Do not pull, bend or damage the cord.
- Do not use plug adapter.
- This appliance is designed for use by adults. Do not allow children to play with the appliance or hang off the door.
- Never touch the power cord/plug with wet hands. This may cause a short circuit or electric shock.
- Do not place glass bottles or cans in the ice-making compartment as they will burst when the contents freeze.
- Do not place explosive or flammable material in your refrigerator. Place drinks with high alcohol content vertically in the refrigerator compartment and make sure their tops are tightly closed.
- When removing ice from the ice-making compartment, do not touch it. Ice may cause frost burns and/or cuts.
- Do not touch frozen goods with wet hands. Do not eat ice-cream or ice cubes immediately after they are removed from the ice-making compartment.
- Do not re-freeze thawed frozen food. This may cause health issues such as food poisoning.

Old and Out-of-order Fridges

- If your old fridge or freezer has a lock, break or remove the lock before discarding it, because children may get trapped inside it and accidents may occur.
- Old fridges and freezers contain isolation material and refrigerant with CFC. Therefore, take care not to harm environment when you are discarding your old fridges.

CE Declaration of conformity

We declare that our products meet the applicable European Directives, Decisions and Regulations and the requirements listed in the standards referenced.

Disposal of your old appliance

The symbol on the product or on its packaging indicates that this product may not be treated as household waste.

Instead it shall be handed over to the applicable collection point for the recycling of electrical and electronic equipment. By ensuring this product is disposed of correctly, you will help prevent potential negative consequences for the environment and human health, which could otherwise be caused by inappropriate waste handling of this product. For more detailed information about recycling of this product, please contact your local city office, your household waste disposal service or the shop where you purchased the product.

Packaging and the Environment

Packaging materials protect your machine from damage that may occur during transportation.

The packaging materials are environmentally friendly as they are recyclable. The use of recycled material reduces raw material consumption and therefore decreases waste production.

Notes:

- Please read the instruction manual carefully before installing and using your appliance. We are not responsible for the damage occurred due to misuse.
- Follow all instructions on your appliance and instruction manual, and keep this manual in a safe place to resolve the problems that may occur in the future.
- This appliance is produced to be used in homes and it can only be used in domestic environments and for the specified purposes. It is not suitable for commercial or common use. Such use will cause the guarantee of the appliance to be cancelled and our company will not be responsible for the losses to be occurred.
- This appliance is produced to be used in houses and it is only suitable for cooling / storing foods. It is not suitable for commercial or common use and/or for storing substances except for food. Our company is not responsible for the losses to be occurred in the contrary case.

Installation

Positioning

Position the appliance on a firm, level surface.

The appliance has two small wheels on the back to allow it to be moved and positioned more easily.

In any case, we recommend moving the appliance very carefully in order to avoid damaging the floor (especially in the case of wooden floors).

If the floor is not perfectly level, use the two adjustable feet on the front part of the appliance level the appliance horizontally adjusting its feet.

Lean the appliance slightly towards the rear part to facilitate proper door closure.

The images are indicative. The aesthetics of the appliance, shape, dimensions and position of the handles depend on the model purchased.

Installation

Spacers

To ensure proper cooling of condenser, the appliance must not be placed too close to the wall. To prevent this, the appliance comes complete with two spacers, which must be fitted in the rear part of the appliance.

EN

Pressure on the seal

Risk of damages to the appliance

- Do not press, do not tear or detach the seal from the door.

A few days after installation, check that the initial level adjustment is still correct. Make sure that the appliance is still stable and the door seals still close hermetically when it is in operation and loaded with food.

If necessary, re-adjust the level and the seals.

6.5 Replacing the seal

The door seal can be replaced by the user:

1. Remove the seal by pulling it out of its housing.
2. Reposition the new seal and press along the entire perimeter to insert into the appropriate housing.

In order for the freezer to be installed correctly, the door must be able to close properly. Ensure that the door seals close hermetically, especially at the corners.

Shipment and repositioning

7 Shipment and repositioning

7.1 Transportation and Changing Positioning

- The original packaging and foam may be kept for re-transportation (optional).
- Fasten your appliance with thick packaging, bands or strong cords and follow the instructions for transportation on the packaging.
- Remove all movable parts (shelves, accessories, vegetable bins, and so on) or fix them into the appliance against shocks using bands when re-positioning or transporting.

 Always carry your appliance in the upright position.

Before calling after-sales service

8 Before calling after-sales service

Errors

Your appliance will warn you if the temperatures for the appliance and freezer are at improper levels or if a problem occurs with the appliance. Warning codes are displayed in the freezer and refrigerator indicators.

ERROR TYPE	MEANING	WHY	WHAT TO DO
E01	Sensor warning		Call Service for assistance as soon as possible.
E02	Sensor warning		Call Service for assistance as soon as possible.
E03	Sensor warning		Call Service for assistance as soon as possible.
E06	Sensor warning		Call Service for assistance as soon as possible.
E07	Sensor warning		Call Service for assistance as soon as possible.
E08	Low Voltage Warning	Power supply to the device has dropped to below 170 V.	-This is not a device failure, this error helps to prevent damages to the compressor.
			-The voltage needs to be increased back to required levels If this warning continues an authorised technician needs to be contacted.
E09	Freezer compartment is not cold enough	Likely to occur after long term power failure.	1. Set the freezer temperature to a colder value or set Super Freeze. This should remove the error code once the required temperature has been reached. Keep doors closed to improve time taken to reach the correct temperature.
			2. Remove any products which have thawed/defrosted during this error. They can be used within a short period of time.
			3. Do not add any fresh produce to the freezer compartment until the correct temperature has been reached and the error is no longer.
			If this warning continues an authorised technician needs to be contacted.

Before calling after-sales service

ERROR TYPE	MEANING	WHY	WHAT TO DO
E10	Refrigerator compartment is not cold enough	Likely to occur after:	1. Set the refrigerator temperature to a colder value or set Super Cool. This should remove the error code once the required temperature has been reached. Keep doors closed to improve time taken to reach the correct temperature.
		-Long term power failure.	2. Please empty the location at the front area of air duct channel holes and avoid putting food close to the sensor.
		-Hot food has been left in the fridge.	If this warning continues an authorised technician needs to be contacted.
E11	Refrigerator compartment is too cold	Various	1. Check is Super Cool mode is activated
			2. Reduce the refrigerator compartment temperature
			3. Check to see if vents are clear and not clogged
			If this warning continues an authorised technician needs to be contacted.

If you are experiencing a problem with your refrigerator, please check the following before contacting the after-sales service.

Your refrigerator does not operate

Check if:

- Your fridge is plugged in and switched on
- The fuse has blown
- Is the temperature adjustment right?
- The socket is faulty. To check this, plug another working appliance into the same socket.

Your refrigerator is performing poorly

Check if:

- The appliance is overloaded
- The doors are closed properly
- There is any dust on the condenser
- There is an adequate distance between the appliance and surrounding walls

Before calling after-sales service

Your refrigerator is operating noisily

The following noises can be heard during normal operation of the appliance.

Cracking (ice cracking) noise occurs:

- During automatic defrosting.
- When the appliance is cooled or warmed (due to expansion of appliance material).

Clicking noise occurs: When the thermostat switches the compressor on/off.

Motor noise: Indicates the compressor is operating normally. The compressor may cause more noise for a short time when it is first activated.

Bubbling noise and splashing occurs:

Due to the flow of the refrigerant in the tubes of the system.

Water flowing noise occurs: Due to water flowing to the evaporation container. This noise is normal during defrosting.

Air blowing noise occurs: During normal operation of the system due to the circulation of air. There is a build-up of humidity inside the refrigerator.

Check if:

- All food is packed properly. Containers must be dry before being placed in the refrigerator.
- The refrigerator doors are opened frequently.
Humidity of the room will enter the fridge each time the doors are opened.

Humidity increases faster if the doors are opened frequently, especially if the humidity of the room is high.

- There is a build-up of water droplets on the rear wall. This is normal after automatic defrosting (in Static Models).

The doors are not opening or closing properly

Check if:

- There is food or packaging preventing the door from closing
- The door compartments, shelves and drawers are placed properly
- The door gaskets are broken or torn
- Your appliance is level.

The edges of the appliance in contact with the door joint are warm

Especially during summer (warm weather), the surfaces in contact with the door joint may become warmer during operation of the compressor. This is normal.

Important Notes:

- In the case of a power failure, or if the appliance is unplugged and plugged in again, the gas in the cooling system of your refrigerator will destabilise, causing the compressor protective thermal element to open. Your refrigerator will start to operate normally after 5 minutes.
- If the appliance will not be used for a long period of time (such as during holidays), disconnect the plug. Defrost and clean the refrigerator, leaving the door open to prevent the formation of mildew and odour.

Practical energy saving advice

- If the problem persists after you have followed all the instructions above, please consult the nearest Authorised Service Centre.
 - This appliance is designed for domestic use and for the stated purposes only. It is not suitable for commercial or common use. If the consumer uses the appliance in a way that does not comply with these instructions, we emphasise that the manufacturer and the dealer will not be responsible for any repair or failure within the guarantee period.
5. Avoid keeping the doors open for long periods and opening the doors too frequently as warm air will enter the appliance and cause the compressor to switch on unnecessarily often.
 6. Keep the covers of the different temperature compartments (such as the crisper and chiller) closed.
 7. The door gasket must be clean and pliable. Replace gaskets if worn.
 8. Clean the condenser (if can be accessed) at the rear of the appliance periodically to prevent the appliance from losing efficiency.

9 Practical energy saving advice

1. Install the appliance in a cool, well-ventilated room, but not in direct sunlight and not near a heat source (such as a radiator or oven) otherwise an insulating plate should be used.
2. Allow warm food and drinks to cool before placing them inside the appliance.
3. Place thawing food in the refrigerator compartment. The low temperature of the frozen food will help cool the refrigerator compartment while the food is thawing. This will save energy. Frozen food left to thaw outside of the appliance will result in a waste of energy.
4. Drinks or other liquids should be covered when inside the appliance. If left uncovered, the humidity inside the appliance will increase, therefore the appliance uses more energy. Keeping drinks and other liquids covered helps preserve their smell
